

Apprenticeship Outline of Study

Intermediate Masters Course Practical “hands on” Training:

Rosacea treatments
Anti-aging facial treatments
Pore cleansing facial treatments
Hydrating facial treatments
Microdermabrasion
Advanced Chemical peeling - including beta hydroxy acids, alpha hydroxy acids, Jessner solution, , and active enzymes

Advanced waxing
Camouflage makeup
Can include : Advanced manicures & pedicures - including credo blade for callous removal, and pedi-peels

I do not work with a laser as I am not in a physicians office or affiliated with a physician, but I do network and could arrange a meeting with a laser clinic to let us observe laser treatments in practice.

As part of training we can also observe botox and or filler treatments done by a practicing Dermatologist.

This course as my apprentice will be designed to meet your needs and skin care interests.

Intermediate Masters Course Classroom Theory:

We will not have formal lectures, but rather discussions and meetings about the text theory as well as the application of practical tests given during your apprenticeship to prepare you for the state certification test.

Medical terminology, charts, and documentation
Working in a Medical Environment
Basic Business Administration

***As part of apprenticeship you will learn about the Corrective Skin Care Line of Products to work with and will be fully trained in this line.

***Research will be a large part of your apprenticeship. I will have you interview Doctors and other wellness providers in our field of Esthetics and research current skin care trends as a means for you to discover your own niche and have your own perspective of our industry upon completion of your apprenticeship.
